## Ground Water Management Area Maps

# Virginia Ground Water Management Areas

### VA Ground Water Management Areas (GWMA)

Initiated by Board motion or petition received from any county, city or town in area, when...

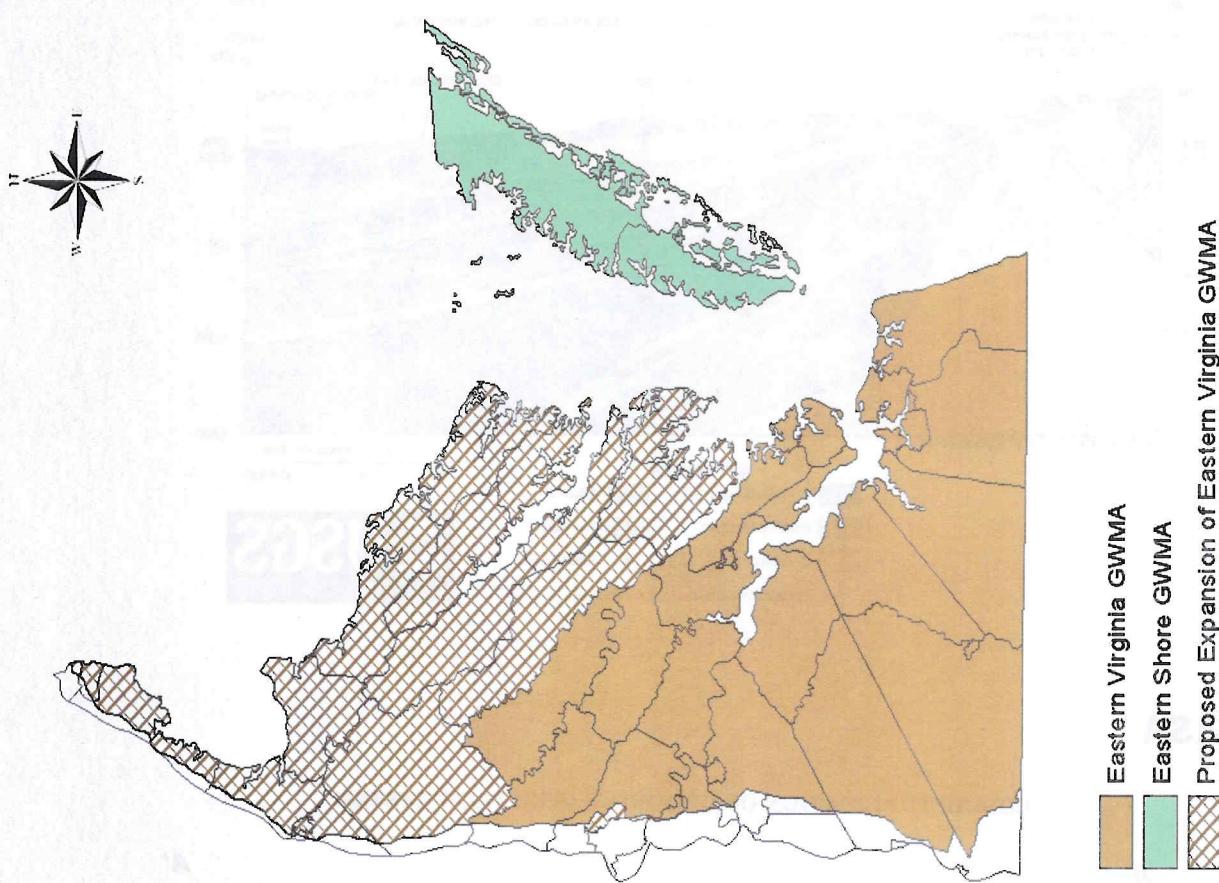

1. GW levels are declining.
2. Well interference is occurring.
3. Supply may be overdrawn.
4. Adverse changes to water quality have occurred or are expected.

Office of Ground Water Management  
Prepared by Beverly Quaranta  
April 3, 2005

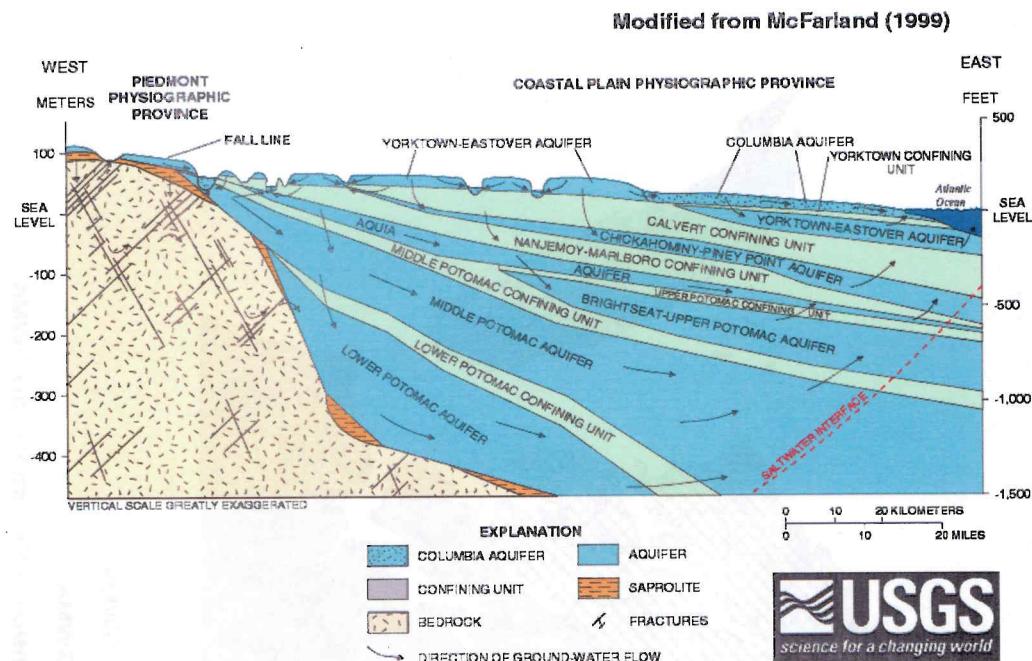

\*Only those portions  
east of I-95 are  
included in the  
Eastern Virginia GWMA

## Cone of Depression / Allowable Drawdown Illustrations

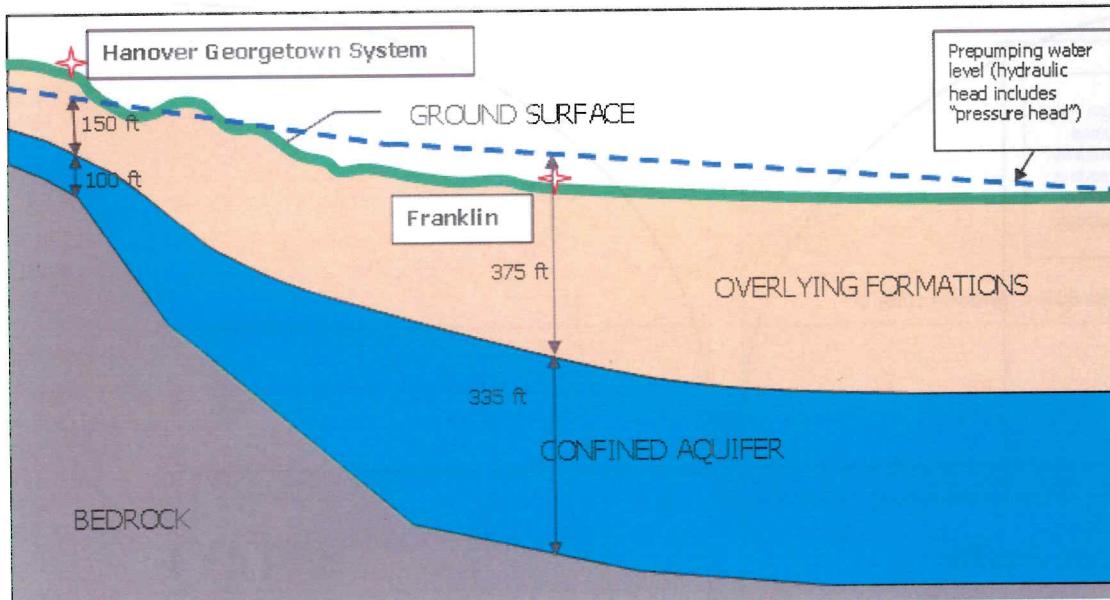

The Virginia Coastal Plain consists of an eastward dipping and thickening wedge of generally unconsolidated sands and clays. The sediments range in thickness from more than 6,000 feet beneath the northeastern part of the Eastern Shore Peninsula to a feather edge along the Fall Line.

EAST

## Area Of Impact Examples

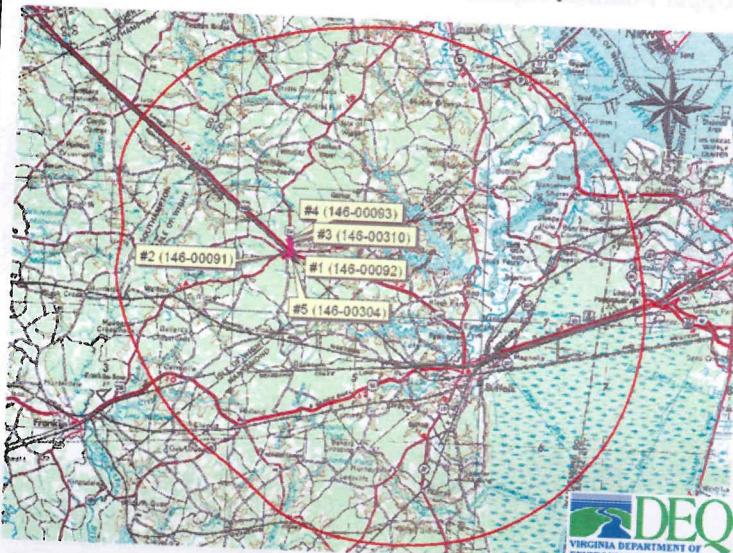

### Area of Impact (one-foot drawdown contour)

- "Area of impact" means the areal extent of each aquifer where more than one foot of drawdown is predicted to occur due to a proposed withdrawal.
- AKA "mitigation area": In cases where the area of impact does not remain on the property owned by the applicant or existing ground water withdrawers will be included in the area of impact, the applicant shall provide and implement a plan to mitigate all adverse impacts on existing ground water users.

### AOI = Mitigation Area

(This is a VCPM evaluation of 600,000 gpd in an area of coalescing cones of depression.)

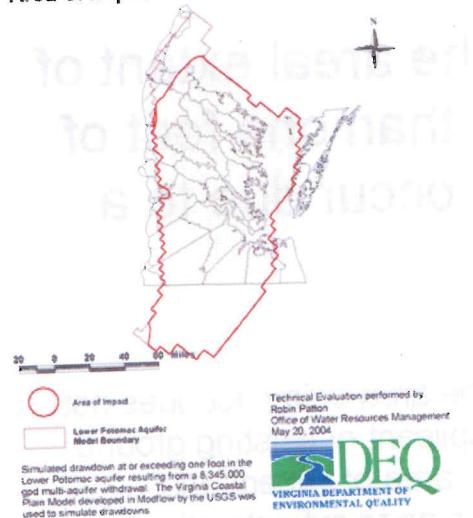

**Town of Windsor - Windsor Public Water System  
Area of Impact - Upper Potomac Aquifer**
